## BLOODWORK CONSENT FORM

Just like human medicine, early detection screening enables a doctor to catch a disease earlier and provide treatment early when it is most effective. Early detection can add years to an animal's life and identify potentially significant diseases before they become clinically apparent. The most common diseases detected in asymptomatic pets include chronic kidney insufficiency, liver or endocrine diseases, and hypothyroidism in dogs.

Trusty Vet's Junior Wellness Testing for pets less than 7 years of age includes a heartworm and intestinal parasite screening in dogs and detects blood values changes that could indicate diabetes, kidney and liver disease, infection or inflammation, and anemia in both dogs and cats.

Trusty Vet's Senior Wellness Testing for pets over 7 years of age includes a heartworm and intestinal parasite screening in dogs and detects blood value changes that could indicate diabetes, kidney and liver disease, pancreatitis, jaundice, adrenal disease, muscle injury, infection and inflammation, and anemia in cats and dogs. A urinalysis is included to screen for bladder infection or bladder stones in both dogs and cats. Hypothyroidism in dogs and hyperthyroidism in cats is also able to be detected.

If your pet has not ever had any blood testing performed previously, starting with a baseline of their normal values is invaluable. Periodic testing provides tracking of changes to determine if medical intervention is necessary. An added benefit of the Wellness Testing profiles is access to board-certified veterinary internal medicine specialists for consultation of individual cases.

---

I have read the information above and elect to have \_\_\_\_\_'s early detection screening performed as a:

- Mature Wellness Testing (\$107.21-dogs and \$94.99-cats)  
 Advanced Wellness Testing (\$149.72-dogs and \$111.31-cats)

I have read the information above and decline the early detection screening for \_\_\_\_\_ but do elect to have parasite screening performed including:

- Heartworm Testing (\$38.95)       Intestinal Parasite Testing (\$32.66)

**I have read the above information and decline early detection screening and parasite screening. I acknowledge that my pet may have an underlying disease that cannot be detected with the doctor's physical exam. I release the doctor(s) and staff at Trusty Vet of all responsibility for my decision.**

All recommended screenings have been declined for \_\_\_\_\_.
